

EDI Transaction Data Quality & Compliance

GXS Trading Grid Messaging Services

Rite Aid is in the process of implementing the **Data Quality and Compliance (DQC)** SAAS solution from GXS. The service will be monitoring transactions that Rite Aid is exchanging and moving through the Trading Grid Messaging Service, against certain validation and life-cycle business rules.

Proactive alerts will be generated to Trading Partners under the initial phase of the program as determined by Rite Aid. Trading Partners will be contacted and advised accordingly in the near future as the program becomes functional.

Under **DQC** certain alerts will be delivered immediately and others will be at end-of-day. The service applies both transaction and business process rules validation to allow proactive recognition of issues that impact the business.

More information and details will be forthcoming on this Rite Aid EDI/B2B initiative in the near future. [Click here for an overview of the service.](#)
